  - Linux

SpeedTouch 330

Plug and surf

With the SpeedTouch 330, surfing the Internet becomes a whole new experience. Just plug your modem into the USB-port and let the fun begin.
This ADSL modem combined with the Universal Serial Bus interface of your computer offers a true plug-and-play installation. The SpeedTouch USB is the ideal solution for residential customers and teleworkers who want to use high-performance applications but can't afford to spend hours configuring their system.

Trouble-Free

The Universal Serial Bus is specifically designed to add external peripherals to a computer system in a fast and easy way. Moreover, USB enables applications like high-speed Internet access over an ADSL modem by virtue of its high throughput. This explains why USB is becoming the most popular computer peripheral interface. Most computers today come with one or more USB ports.

Easy installation

The software delivered with the unit installs in just a few mouseclicks. Its ease of use has been field proven by the millions of users throughout the world that successfully configured their SpeedTouch 330 without any external help.
The installer supports English, French, German, Spanish, Portuguese, Italian, Dutch and Swedish simultaneously on the same CD. In no time, the SpeedTouch 330 will be up and running.

Customization

The setup wizard has been designed to provide easy and flexible customization options for service providers looking for a product that blends nicely into their corporate look and feel and integrates with their other user interfaces.
All network specific parameters can be pre-configured in the host software by the service provider, ensuring a true plug-and-play customer experience. Aprofile can be created for each customer type, giving access to the relevant ADSL service.
